2017 40 situps/min

# ~ Calorie Logger ~

IDEA

8 cups of water == healthy

METAPHOR

weight + type  
== accurate estimate  
of calories

MODEL

log: 100cal  
5g banana  
10g apple

DISPLAY

wrong calculation:

log: 50 cal  
5g banana  
10g apple

ERROR

hmm

I want to  
lose weight

SCENARIO

1. weight food

2. enter food type

banana

3. calculate + record  
calories

+100cal

TASK

100cal  
today

button  
press  
for total cal

CONTROL

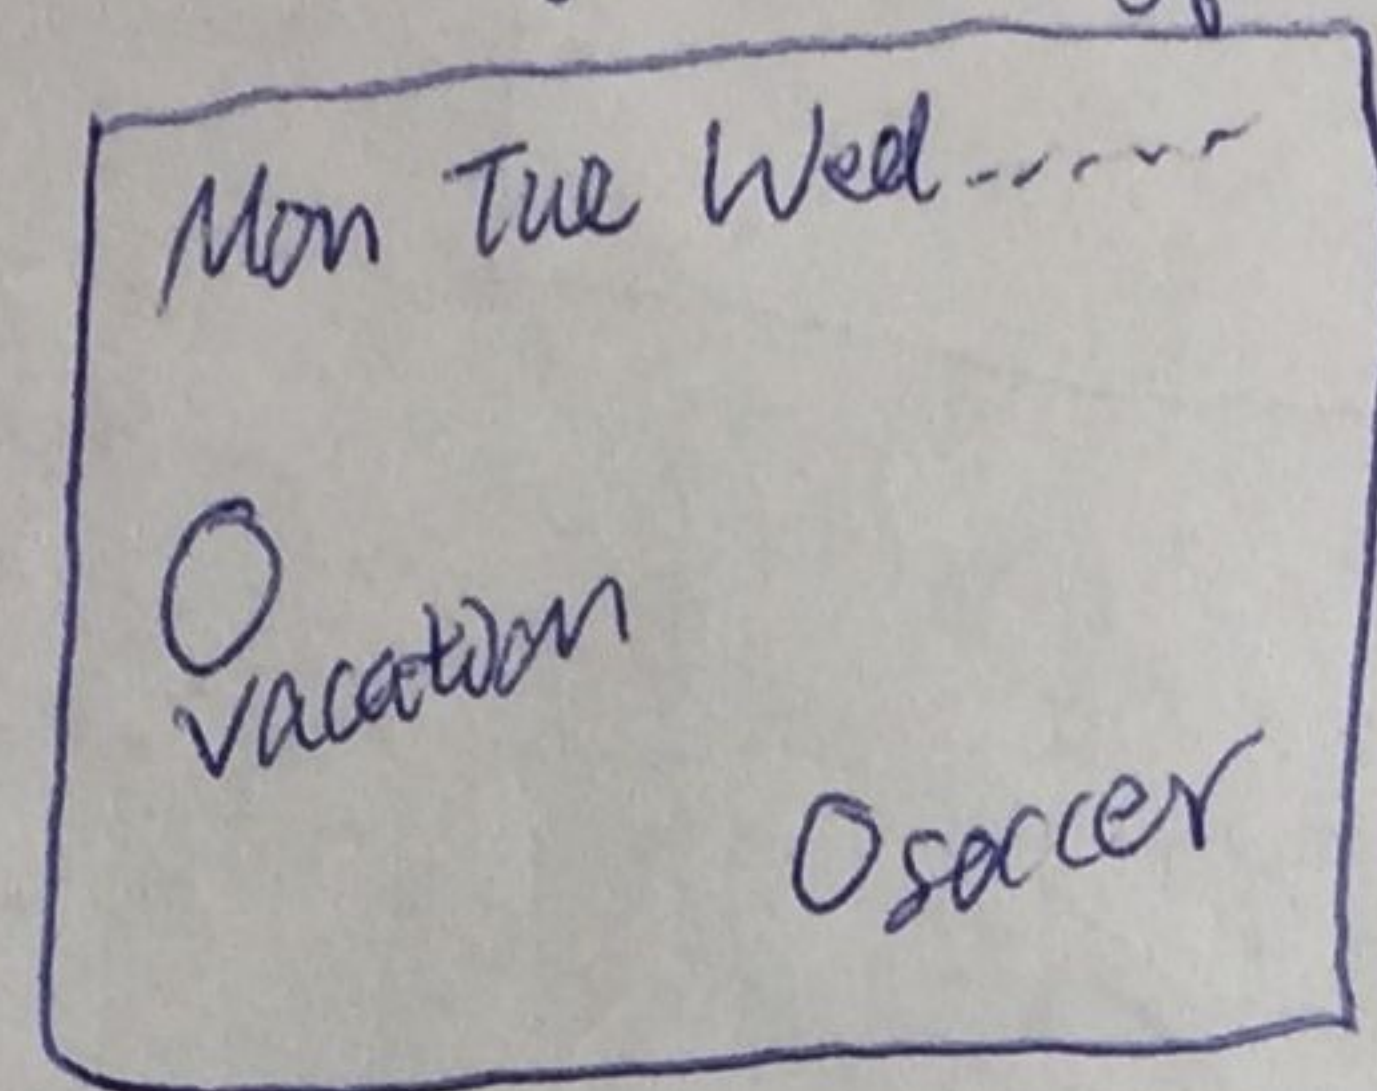

~ meeting log ~  
meeting

IDEA

personal calendar  
with a lot  
of details

METAPHOR

message:

5am meeting  
with sky divers

easy communication

quick update

MODEL

DISPLAY

X Wrong  
meeting = 1 member

✓ Right  
meeting = 5 members

wrong meeting  
information

ERROR

SCENARIO

2. setup meeting  
automatically logged

3. find meeting again  
through logger

TASK

CONTROL

~ weight logger ~

Target  $\Rightarrow$  100lb

day 1 at 150lb

50% fat 50% muscle

day 2 at 120lb

40% fat 60% muscle

day 3 at 100lb

30% fat 70% muscle

IDEA

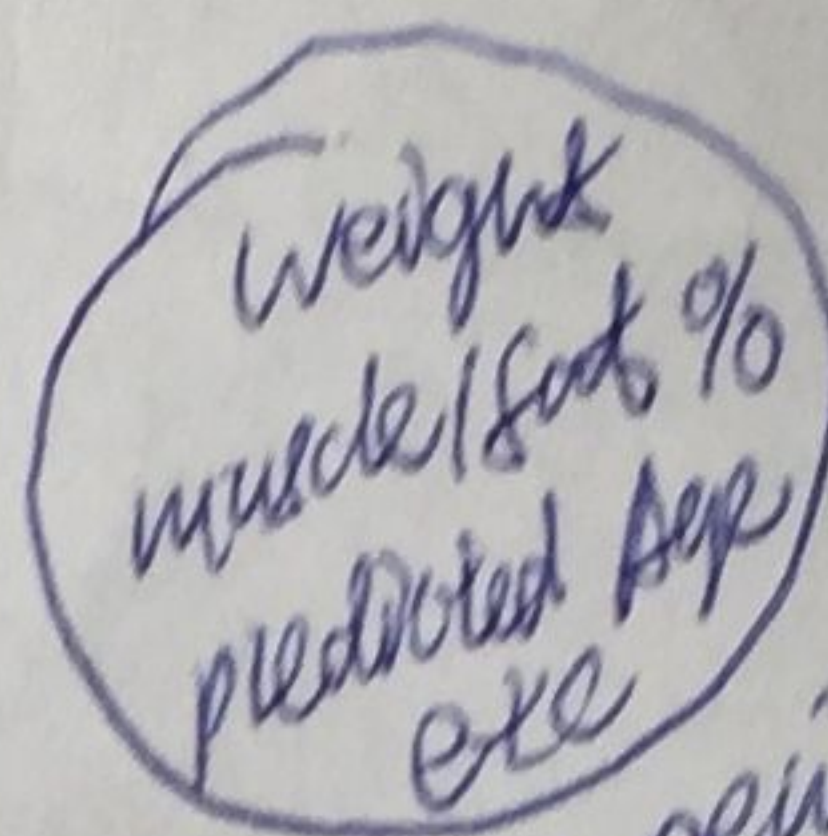

sticky notes  
as reminders

METAPHOR

daily vs. monthly  
records

specific  
content

MODEL

DISPLAY

where is my data  
for yesterday?

day 1  $\checkmark$  day 2 ? day 3  $\checkmark$

ERROR
